United States biological weapons program - Wikipedia

Various types of biological warfare (BW) have been practiced repeatedly throughout history. This has included the use of biological agents (microbes and plants) as well as the biotoxins, including venoms, derived from them.. Before the 20th century, the use of biological agents took three major forms: . Deliberate contamination of food and water with poisonous or contagious material

History of biological warfare - Wikipedia

Biological agents are organisms or toxins that can kill or incapacitate people, livestock and crops. A biological attack is the deliberate release of germs or other biological substances that can make you sick. There are three basic groups of biological agents that could likely be used as weapons: bacteria, viruses and toxins. Biological agents can be dispersed by spraying them

The Military Health System (MHS) collects and shares a significant amount of information on performance across numerous measures for health outcomes, quality, safety, and access. We have always had information available about our health system, but it wasn't always easy to find or easy for people to understand without medical training. One of the recommendations made by the Review of the ...
