Strength of Materials by S K Mondal - Scribd

What Is Brazing? Brazing is a method of joining two pieces of metal together with a third, molten filler metal. The joint area is heated above the melting point of the filler metal but below the melting point of the metals being joined; the molten filler metal flows into the gap between the other two metal pieces by capillary action and forms a strong metallurgical bond as it cools.

Carbon nanotubes (CNTs) are allotropes of carbon with a cylindrical nanostructure. These cylindrical carbon

molecules have unusual properties, which are valuable for nanotechnology, electronics, optics and other fields of materials science and technology. Owing to the material's exceptional strength and stiffness, nanotubes have been constructed with length-to-diameter ratio of up to ...

Functional disability related to midline bulging of the abdominal wall is a common complaint in women after childbirth. Abdominal rectus diastasis (ARD) is a sequela of the expansion of the abdominal contents during pregnancy. Massive weight loss and/or congenital disproportion of the collagen III/I ratio may also result in ARD.

Operative correction of abdominal rectus diastasis (ARD)

Anabolic steroids, also known more properly as anabolic-androgenic steroids (AAS), are steroidal androgens that include natural androgens like testosterone as well as synthetic androgens that are structurally related and have similar effects to testosterone. They are anabolic and increase protein within cells, especially in skeletal muscles, and also have varying degrees of androgenic and ...
